CATHETER

FOR EFFECTIVE AND SAFE CHEST DRAINAGE MANAGEMENT

A prospective observational study shows that 36% of drains occlude after cardiac surgery. 86% of these occlusions take place in the patient and are not visible to the doctor and nursing staff. 4 The thoracic catheter with the unique ClotStop® hydrogel polymer coating helps to minimize the risk of clotting and thus prevent occlusion of the catheter. The catheter coating is not an anti-coagulant and is medically harmless as it does not affect natural blood clotting. In contact with Liquids create such a low coefficient of friction that thrombocytes cannot adhere to the catheter. The Hydrogel polymer coating prevents tissue encrustation and the formation of blood clots. The diminished Resistance at the surface of the catheter thus promotes continuous fluid drainage and reduces the need for milking. ² The ClotStop® catheters are made of silicone and ensure easy and safe placement in the thorax. That pleasant soft material also allows patients to move freely and without discomfort, promoting patient comfort. Using ClotStop® increases patient safety and promotes improved recovery. 1
